A MINI PROJECT REPORT ON

WATER LEVEL MONITOR

Submitted in fulfillment of the requirement

of Computer Communication Lab

By

SUJAL CHORDIYA RA2111003010938
PRANJALI SHARMA RA2111003010939
Priyamvada Jadon(RA2111003010950)
Bhavya Malhotra(RA2111003010951)
Jayatri Banarjee(RA2111003010958)

Under the Guidance of

Dr.M.Gayathri

Professor (NWC)

Department of Networking and Communication

SRM Institute of Science and Technology, Kattankulathur

CERTIFICATE

This is to certify that Computer Communication Lab Mini Project entitled "**WATER LEVEL MONITOR**" Submitted by Sujal Chordiya (RA2111003010938), Pranjali Sharma (RA2111003010939), Priyamvada Jadon(RA2111003010950), Bhavya Malhotra(RA2111003010951), Jayatri Banarjee(RA2111003010958) for the partial fulfilment of therequirement for Semester IV Subject of Computer Communication Lab to the SRM Institute of Science and Technology, is a bonafide work carried out during Semester IV in Academic Year 2022-2023.

Declaration

We declare that this written submission represents our ideas in our own words and where others' ideas or words have been included, we have adequately cited and referenced the original sources. We also declare that I have adhered to all principles of academic honesty and integrity and have not misrepresented or fabricated or falsified any idea/data/fact/source in my submission. We understand that any violation of the above will be cause for disciplinary action by the Institute and can also evoke penal action from the sources which have thus not been properly cited or from whom proper permission has not been taken when needed.

ABSTRACT

Irrigation is the process of supplying water to the land at regular intervals by means of canals and other artificial methods, to enhance agricultural growth and maintain the landscape during periods of less average rainfall. A sprinkler is a device used to spray water. Sprinklers are used to water plants or grass, or to put out fires in buildings. A sprinkler system is important for this, as it is a very efficient method/form of watering the landscape. It helps to put in the water in exact amounts, at exact spots, even much better than hoses and movable sprinklers. In other words, only part of the water is used efficiently, and the rest of the water is lost for the crops on the fields that were to be irrigated. It releases water similar to rainfall through a small diameter nozzle placed in the pipes. Water is distributed through a system of pipes, sprayed into the air and irrigates in most the soil type due to the wide range of discharge capacity. In this project, we have used Cisco Packet Tracer to create a water level monitor. We have made this using two lawn sprinklers, a home gateway, water level monitor all this is being controlled using a smartphone

OBJECTIVE

Water is a limited resource and is also essential for agriculture, industry and for creature survival on the earth including human beings. Nowadays more water is being wasted in many uncontrolled ways. This leads to the extinction of water as it is a limited resource. Therefore efficient use and water monitoring are Essential. With the help of a water monitoring system, water wastage will be reduced, also power consumption gets reduced. Thereby, we can preserve water for the next generations. Through water level monitoring, we can avoid the over-flowing of water from the tank. Water level monitoring system application is more significant in-home applications. Internet of Things (IoT) is the network of physical devices, sensors, actuators and connectivity which enables these objects to connect and exchange data. “Things” in the IoT sense refers to various devices such as heart monitoring implants, biochip transponders, cameras, sensors, etc., These devices collect useful data with the help of various existing technologies and then autonomously flow the data between other devices. IoT allows objects to be sensed or controlled remotely across existing networks. IoT creates more opportunities for more direct integration of the physical world into computer-based systems which improves the efficiency and accuracy of the systems.

INTRODUCTION

Water is distributed through a system of pipes, sprayed into the air and irrigates in most the soil type due to the wide range of discharge capacity. In this project, we have used Cisco Packet Tracer to create a water level monitor. We have made this using two lawn sprinklers, a home gateway, water level monitor all this is being controlled using a smartphone. These devices collect useful data with the help of various existing technologies and then autonomously flow the data between other devices. IoT allows objects to be sensed or controlled remotely across existing networks. IoT creates more opportunities for more direct integration of the physical world into computer-based systems which improves the efficiency and accuracy of the systems. Therefore, using CISCO PACKET TRACER we have built the water monitor model.

CONCLUSION

Hence a project was developed on the topic of Water Level Monitor to reduce the wastage of water and other resources using Cisco Packet Tracer.
